# Adding text

## HEADINGS <h1> – <h6>

Heading elements are used to create titles and organize content on a webpage. They help define a clear structure by indicating the importance of each section. There are six levels of headings, and you can think of them as similar to chapter titles, section headers, and sub-sections in a book.

index.htmlcontact.htmlExpand

```
1 <h1>Today's news</h1>
2 <h2>Sports</h2>
3 <h3>Football</h3>
4 <h4>Late touchdown seals win in tight matchup</h4>
5 <p>By Alex Levy</p>
6 <h3>Basketball</h3>
7 <h4>Missed free throws prove costly</h4>
8 <p>By Alex Levy</p>
9 <h2>Politics</h2>
```

##### Politics

DO'S AND DON'TS

### Headings

Do ...

- Use only a single H1 element per page, acting as the title/main heading that describes all the content on that particular page.
- Think about the information hierarchy when making your headings.

Don't ...

- Skip headings (e.g. going from an H2 heading to an H4 heading).
- Make your choice of heading element based on design or styling (remember that you can change the look of anything later using CSS).

## PARAGRAPHS <p>

Paragraph elements (aka <p> tags) are used to create blocks of text. Despite the name, they don't actually need to be a full paragraph (you can have a <p> tag with one sentence if you want).

```
1 <p>Hi there!</p>
2 <p>What's up?</p>
3 <p>Learning HTML.</p>
4 <p>Wow that's cool!</p>
```

## COMMENTS <!-- -->

Comments are useful if you want to leave notes for yourself or other people reading the code without being shown on the actual site. You can also use comments to disable chunks of code, which can be useful for testing different layouts or content.

```
1 <!-- A note to myself -->
2 <!-- <h1>This won't show up</h1>
3 <h2>This won't show up either</h2> -->
4 <h3>But this will!</h3>
```

## PRACTICE

Complete all tasks to continue

STEP 1

Follow the steps in the tutorial to learn how to use the code editor.

STEP 2

Using the element structure from above, write the code for an H1 element that serves as the main headline for your contact page.

STEP 3

Create the headings that you need for the home page of your portfolio. You probably won't use all 6 headings.
